Abstracts

According to our (Global Info Research) latest study, the global Natural Bee Honey market size was valued at USD 7099.8 million in 2023 and is forecast to a readjusted size of USD 9235.2 million by 2030 with a CAGR of 3.8% during review period.

Natural Bee Honey is a sweet food produced by bees foraging nectar from flowers. Honey bees convert nectar to honey through regurgitation and evaporation. The bees store the honey as a primary food source in wax honeycombs inside beehives. The beekeepers extract the honey by removing the honey comb and then by crushing it or using a honey extractor. Honey bees form an important part of the food chain as they aid in pollination, which is required to support the food chain.

Growing consumer preferences for a healthy and natural alternative over artificial sweeteners and the increasing awareness about the benefits of honey are majorly driving the global honey market growth. Artificial sweeteners lead to obesity, elevated cholesterol, mineral depletion, mood swings, tooth decay, hypertension, and cardiovascular diseases. They are also responsible for causing Type 2 diabetes, metabolic syndrome, and different types of cancers and tumors. However, unlike nutrient-void processed sugar and chemical-spiked artificial sweeteners, honey has a less glycemic index (GI), which means that it does not raise the blood sugar levels quickly. However, health disorders and botulism caused due to raw honey's intake may restrain the market growth in the upcoming years.
