## Abstracts

According to our (Global Info Research) latest study, the global Natural Borneol market size was valued at US\$ 108 million in 2025 and is forecast to a readjusted size of US\$ 190 million by 2032 with a CAGR of 8.5% during review period.

Natural borneol, also known as d-borneol, is a bicyclic monoterpene compound, mainly extracted from the resin, branches and leaves of Lauraceae plants (such as borneol camphor and borneol), with a unique refreshing aroma and medicinal value. With the increasing demand of consumers for natural and green products, the market size of natural borneol has expanded year by year, and its recognition in the international market has continued to increase.

The upstream core of the industry lies in the cultivation of raw material forests. This mainly includes the breeding of superior varieties of borneol-containing plants such as \**Cinnamomum camphora*\* and \**Blumea balsamifera*\*, standardized cultivation, and forest management. The growth cycle, climate suitability, and harvesting quality of the raw material forests directly determine the yield.

Global sales are expected to reach hundreds of tons by 2025. Product prices vary depending on purity, ranging from approximately \$600 to \$1000 per kilogram, with 99.99% purity products reaching up to \$10,000 per kilogram. The industry's gross profit margin is between 20%-35%.

Natural borneol is high-purity dextrorotatory borneol extracted from natural plants such as *Cinnamomum camphora* of the Lauraceae family. As a valuable traditional Chinese medicine and high-grade fragrance, its medicinal value and safety far surpass those of artificially synthesized borneol. The unique position of natural borneol in cardiovascular,

ENT, and dermatological medications has led to its increased use alongside the growth in exports of traditional Chinese medicines. Furthermore, local forestry support policies (such as the Cinnamomum camphora industrialization projects in Guangdong and Jiangxi provinces) provide a stable foundation for expanding upstream resources.
