According to our (Global Info Research) latest study, the global Natural Cooling Linear Motor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Natural cooling linear motors dissipate the heat generated inside the motor to the external environment through natural convection, thereby maintaining the working temperature of the motor within the normal range. Its working principle is similar to that of a regular linear motor, both of which are based on the action of magnetic field force to achieve linear motion, except for the difference in heat dissipation method.
