According to our (Global Info Research) latest study, the global Natural Desiccated Thyroid (NDT) market size was valued at USD 308.7 million in 2023 and is forecast to a readjusted size of USD 634.9 million by 2030 with a CAGR of 10.9% during review period.

Natural desiccated thyroid (NDT), also known as desiccated thyroid extract (DTE) and porcine thyroid, is a prescription medication made from the desiccated (dried) thyroid glands of animals. It is generally provided in tablet form. Hypothyroidism is a condition that can affect the entire body and plays a role in many essential processes. Symptoms can include fatigue, weight gain, hair loss, cognitive issues, loss of libido, and more. The only way to treat this condition is by restoring levels of thyroid hormone. There are two types of thyroid medications for doing this which are synthetic and naturally derived. Synthetic thyroid hormones are levothyroxine (T4) and liothyronine (T3), which can be taken separately or combined into one capsule. Desiccated thyroid hormone is made from the glands of pigs and includes T3 and T4 along with the thyroid co-factors T1 and T2. It is made from the entire dried gland so it includes all forms of the thyroid hormone.
