According to our (Global Info Research) latest study, the global Natural Diamond Cutters market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Natural single crystal diamond is the most wear-resistant material in diamond. It has a fine texture and, after fine grinding, the blunt radius of the cutting edge can be as small as 0.008 to 0.005 mm. But the natural single crystal diamond is brittle, its crystal anisotropy, the crystal hardness is different in different crystal faces or different directions of the same crystal face, so the proper direction must be chosen when sharpening and using.

Natural diamond cutting tools are mainly used in the ultra-precision mirror processing of red copper, copper alloy, gold, silver, rhodium and other precious non-ferrous metals, as well as special parts, such as video camera disk, optical plane mirror, multi-surface mirror and quadric mirror. But its crystallization anisotropy, the knife is expensive.
