The global Natural Diamond Polishing Powder market size is expected to reach \$ 484 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Natural Diamond Polishing Powder is an ultra-fine abrasive material made from carefully selected and processed natural diamond crystals, prized for their exceptional hardness and cutting ability. This powder is produced by crushing natural diamond into micron or sub-micron-sized particles, which are then precisely graded to ensure uniformity in size and shape. Widely used in industries requiring ultra-precise finishing, such as optics, semiconductors, ceramics, gemstones, and metal polishing, natural diamond polishing powder delivers superior surface smoothness, scratch-free finishes, and enhanced reflectivity. Compared to synthetic diamond powder, natural diamond tends to offer slightly softer, sharper-cutting characteristics, making it especially valued for delicate or precision polishing tasks where surface integrity is critical. Whether applied in loose form, mixed into slurries, or incorporated into pastes, natural diamond polishing powder is an essential consumable in advanced manufacturing and finishing processes that demand the highest level of quality and consistency.

This report studies the global Natural Diamond Polishing Powder production, demand, key manufacturers, and key regions.
