Natural Fermented Calcium Propionate is a kind of calcium propionate (chemical formula: $C_2H_3CaO_2$) produced by microbial fermentation process, which is a natural food preservative. Its core ingredient, calcium propionate, is produced by microbial metabolism of propionic acid and combined with calcium ions. It not only retains the antiseptic properties of traditional calcium propionate, but also avoids the residual risk of chemical synthesis due to the natural fermentation process, which meets the needs of modern consumers for natural additives.
