The global Natural Food Pigment market size is expected to reach \$ 2309.9 million by 2029, rising at a market growth of 6.4% CAGR during the forecast period (2023-2029).

The natural food pigment market is experiencing several notable trends that are shaping its growth and development. Some key trends in the market include:

- 1. Increasing Demand for Natural and Clean Label Products:** Consumers are becoming more conscious about the ingredients used in their food and beverages. There is a growing demand for natural and clean label products, which has led to an increased interest in natural food pigments. Natural food pigments derived from fruits, vegetables, and other natural sources are perceived as healthier alternatives to synthetic food colorings.
- 2. Shift Towards Plant-based and Vegan Diets:** The rising popularity of plant-based and vegan diets is driving the demand for natural food pigments. Plant-based food and beverages often rely on natural pigments to achieve desired colors without the need for synthetic additives. As consumers seek out more plant-based options, the demand for natural food pigments derived from sources like beetroot, turmeric, spirulina, and others is increasing.
