## Abstracts

According to our (Global Info Research) latest study, the global Natural Gas Separation Membrane market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Natural gas separation membranes are a type of gas separation technology designed to selectively separate gases, particularly separating methane (CH<sub>4</sub>) from other gases such as carbon dioxide (CO<sub>2</sub>) and hydrogen sulfide (H<sub>2</sub>S). These membranes operate on the principle of selective permeation, where certain gases pass through the membrane more easily than others, based on differences in their molecular sizes and affinities for the membrane material.
