## Abstracts

Natural gas storage involves accumulation of natural gas in several storage facilities for future consumption. The purpose of storage is to meet the fluctuating energy demand during the peak and off-peak seasons. Generally, natural gas is stored during the off-peak season and utilized during the peak season. This reduces the demand and supply gap, and increases the reliability of supply.

### SCOPE OF THE REPORT:

This report focuses on the Natural Gas Storage in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Storage facilities are essential for managing supply required to cater to globally rising energy demand. Rapid industrialization along with growing urbanization in emerging economies of Asia Pacific and Latin America is anticipated to propel market growth significantly over the forecast period. Natural gas market deregulation and easy availability have resulted in increasing storage demand for various purposes such as operational and commercial.

Rising natural gas demand is expected to drive oil & gas exploration activities, which in turn increases storage facilities demand. The market is divided in two types, above ground storage and underground storage facilities. Underground storage facilities are further divided into depleted reservoirs, salt caverns formation, and aquifers.

The worldwide market for Natural Gas Storage is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
