## Abstracts

Natural gas storage technologies play vital role in maintaining the reliable supply needed to cater the demands of consumers. Natural gas is most commonly stored as an inventory underground under high pressure or in liquid or gaseous form in above-ground tanks. Natural gas reservoirs are required to compensate for seasonal fluctuations in consumption. For that reason, natural gas is compressed into the underground reservoirs in the summer and withdrawn again in the winter when the demand increases.

According to our (Global Info Research) latest study, the global Natural Gas Storage Technologies market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
