Natural geraniol is isolated and purified from plant essential oils; it is classified as an acyclic monoterpene alcohol fragrance compound. At room temperature, it presents as a colorless to pale yellow oily liquid, characterized by a sweet rose and geranium-like aroma with subtle citrus undertones.

The upstream sector primarily consists of natural plant essential oils rich in geraniol, along with the corresponding raw plant materials; key sources include palmarosa, citronella, rose, geranium, and lemongrass. The midstream segment encompasses processes such as plant distillation for oil extraction, essential oil fractionation, and subsequent refining and purification. Downstream, the product is primarily incorporated into fragrance and flavor formulations for use in sectors such as food, perfumes and fragrances, and personal care products.

In 2025, global sales volume is projected to reach approximately 600 tons, with an average price of approximately \$52 per kilogram; leading manufacturers are expected to maintain gross profit margins ranging from 35% to 55%.
