Abstracts

According to our (Global Info Research) latest study, the global Natural PEEK Rod market size was valued at US\$ 185 million in 2025 and is forecast to a readjusted size of US\$ 250 million by 2032 with a CAGR of 4.4% during review period.

Natural PEEK rod is solid cylindrical special engineering plastic profile made from 100% polyetheretherketone resin without any filler modification, through high-temperature melt extrusion or compression sintering processes. Demand primarily stems from the urgent need in high-end manufacturing for customized structural parts that combine the strength of metal with the processing performance of plastics, and can operate stably in extreme environments (high temperature, corrosion, high wear). The core of its upstream supply chain consists of PEEK resin polymerization and purification, precision extrusion and compression molding equipment, and quality control technology. Downstream, it directly serves professional machining workshops, component manufacturers, and the R&D departments of large end-users, processing them through turning, milling, drilling, and other processes into final products such as semiconductor equipment fixtures, aerospace wear-resistant parts, medical device prototypes, and high-performance industrial seals. In 2025, the production of natural PEEK rods is estimated at approximately 3,000 tons, with an average price of approximately US\$60,000 per ton, a gross profit margin of approximately 25%, and a single-line capacity of 100 tons per year.
