Abstracts

The global Natural Phenolic Antioxidant market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032). Natural phenolic antioxidants are bio-derived compounds such as tocopherols (vitamin E), rosemary extract, green-tea polyphenols, flavonoids, and lignans used to inhibit oxidative degradation in foods, oils, cosmetics, polymers, and nutraceutical formulations. The supply chain begins with agricultural or botanical raw materials (soybean, sunflower, palm, rosemary, tea, citrus, grape seeds, etc.), which are harvested and processed through solvent extraction, supercritical CO₂ extraction, or purification techniques to isolate phenolic fractions. These concentrated antioxidant ingredients are then standardized for purity and potency, blended or formulated by ingredient manufacturers, and supplied to downstream sectors including food producers, personal-care companies, pharmaceutical/nutraceutical brands, and polymer processors. The final distribution network consists of ingredient distributors, OEM formulators, and end-use manufacturers across global consumer and industrial markets. In 2024, global natural phenolic antioxidant production reached about 215,000 tons against a capacity of 265,000 tons annually, with average prices ranging USD 4,200-8,500 per ton depending on source and purity. The industry operated with solid utilization and maintained a healthy 34% gross margin.
