Soap powder is a washing product that combines washing and caring functions. It has the characteristics of natural, strong decontamination, ultra-low foam, and easy to rinse. Its active substances are mainly fatty acids, more than 90% of its raw materials come from renewable vegetable oils, and it does not contain polyphosphates. Some soap powders are pure soap powders without any additives, and some are alkaline soap powders with additives such as sodium carbonate. Neutral soap powder is made from better oil and fat raw materials and is used for washing fine fabrics and industrial aspects. The properties of soap powder are basically the same as soap. After the hot soap base is cooled and solidified, it is cut into pieces or crushed and dried.
