## Abstracts

According to our (Global Info Research) latest study, the global Natural Wine Cork Stoppers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The global wine cork market size was valued at USD 5.7 billion in 2022 and is expected to expand at a compound annual growth rate (CAGR) of 4.57% from 2023 to 2029. The Natural Wine Cork Stoppers type segment dominated the market and accounted for the highest revenue share in 2022.

The maturation of wine finished with a natural cork is predictable as oxygen ingress with natural corks is largely a result from diffusion. Additionally, the physical properties of natural cork interact with wine during the maturation process by developing its character and impacting the creation of the bottle bouquet – the aroma developed during aging. While there have been rapid developments in synthetic cork materials and these improvements have addressed previous shortcomings associated with synthetic cork, natural cork is the oldest and most proven material for use as a wine sealant.

Natural cork has a molecular structure with a regular honeycomb arrangement: closed cells and air-filled interiors. This creates a lightweight raw material that is low density and buoyant without being very permeable to fluids. With good elasticity and the ability to deform without fracturing, cork has good durability and resistance to environmental changes. Highly compressible, natural cork is the only material that can adapt to the internal irregularities of the neck of a wine bottle ensuring proper sealing even if the glass expands or contracts during storage or shipping.
