According to our (Global Info Research) latest study, the global Natural Zeolites market size was valued at USD 1945.1 million in 2023 and is forecast to a readjusted size of USD 2698 million by 2030 with a CAGR of 4.8% during review period.

Natural zeolites are hydrous, aluminosilicate minerals that typically contain alkali and alkaline earth metals, and occur in a variety of geologic settings. There are several groups of natural zeolites with differing chemical and physical properties, but unlike other minerals, nearly all are porous at the molecular level. Due to their large void volume, natural zeolites are low density minerals, reducing handling and processing costs. They are known as molecular sieves due to their molecular-level porosity, which gives them the unique ability to remove and exchange ions and molecules from fluids and gases based on size, shape, and electric charge. Natural zeolites also exhibit a high degree of reversible hydration, making them reusable, with treatment, for extended periods of time.

Natural zeolites include minerals capable of ion exchange, such as clinoptilolite, chabazite, and mordenite. China is the largest producer of natural zeolites, accounting for more than two-thirds of the total, followed by South Korea, Turkey, and Japan. The largest end use for natural zeolites is as a cement additive, to produce a slower-hardening and stronger product. Other major end uses are as a nutrient-release agent in soil conditioners, in animal feeds, and as an odor control agent in animal litter.

The Global Info Research report includes an overview of the development of the Natural Zeolites industry chain, the market status of Agriculture (Clinoptilolite, Chabazite), Feed Additive (Clinoptilolite, Chabazite), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market
