Nautical radio wave radars are radar detectors installed on ships for navigation avoidance, ship positioning, and narrow channel navigation. Wavelet electromagnetic waves are emitted when the echo is received, which helps to identify the range, angle or velocity of the target. Nautical radio wave radars offer advantages for maritime navigation and collision avoidance. It provides mariners with the necessary means of observation when visibility is poor, and even in adverse weather or climatic conditions, they can detect stationary and moving objects, which helps avoid accidents.
