## Abstracts

According to our (Global Info Research) latest study, the global NbTi Superconducting Wire market size was valued at USD 363.2 million in 2022 and is forecast to a readjusted size of USD 593.8 million by 2029 with a CAGR of 7.3% during review period.

Low temperature materials are categorized as those that operate at 4 K and below. Low temperature superconducting wires are often made from niobium titanium or niobium tin. While the wire production itself is cost-effective, the low transition temperature it demands means that assemblies with LTS wire need cost cryogenic cooling components.
