Abstracts

Nickel-cobalt-manganese ternary materials are a new type of lithium-ion battery cathode materials developed in recent years. They have important advantages such as high capacity, good cycle stability, and moderate cost. Because this type of material can effectively overcome the high cost of lithium cobalt oxide materials at the same time, low stability of lithium manganese oxide material, low capacity of lithium iron phosphate, etc., have been successfully applied in batteries, and the application scale has been developed rapidly.

This report studies the global NCM Ternary Material production, demand, key manufacturers, and key regions.
