Abstracts

The global NdFeB market size is expected to reach \$ 19710 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

In 2024, global NdFeB production reached approximately 299501 tonne, with an average global market price of around US\$ 46961 per tonne. NdFeB magnet (also known as Neodymium magnets) is a permanent rare earth magnet formed from an alloy of Neodymium, Iron, and Boron (hence Nd-Fe-B). NdFeB magnets are the strongest, most commonly used rare earth magnets in the world. They provide unparalleled levels of magnetism and resistance to demagnetization when compared to ceramic, alnico, and even samarium-cobalt magnets.

Upgrade of demand structure

New energy vehicles: The usage of neodymium iron boron per vehicle is 5-10 kilograms, and the sales of new energy vehicles in China will reach 9.5 million units in 2024, directly driving demand.

Wind power: Direct drive permanent magnet fans account for 70%, with a single magnet consumption of 2-3 tons.

Humanoid robots: with a single unit consumption of 2-4 kilograms, the global shipment volume is expected to reach 5 million units by 2030.

Technological iteration and innovation

The third-generation neodymium iron boron (NdFeB) has a magnetic energy product of

over 50MGOe. Domestic enterprises have improved the coercivity to over 35kOe through rapid solidification and grain boundary diffusion processes, and reduced the amount of medium and heavy rare earths by 30%. For example, the cerium magnet developed by Baotou Rare Earth Research Institute has reduced the cost by 20% and has been applied in fields such as air conditioning compressors.

Competitive landscape and policy impact

China leads the global supply chain, accounting for over 70% of production in 2024, forming industrial clusters such as Ningbo and Baotou. In terms of policy, the control of rare earth mining indicators and export restrictions have optimized the supply and demand pattern, but the export of permanent magnet products has not been restricted, which is beneficial for local enterprises.

Risks and Challenges

International countermeasures: The United States, Europe, and Japan may weaken China's advantage through technological substitution or trade negotiations.

Environmental pressure: It is necessary to address the pollution caused by rare earth mining and promote reduction measures such as low dysprosium technology.
