Non-destructive testing or NDT is a wide group of analysis or investigation techniques used to evaluate the properties or characteristics of a component, material, or system without producing damage. The terms non-destructive inspection (NDI), non-destructive evaluation (NDE) and non-destructive examination (NDE), are also frequently used to explain this technology. As NDT does not enduringly alter the article being examined or inspected, it is a highly appreciated and valuable technique that can save both time and money in product evaluation, research, and troubleshooting.

According to our (Global Info Research) latest study, the global NDT Equipment market size was valued at USD 2231.7 million in 2022 and is forecast to a readjusted size of USD 3558 million by 2029 with a CAGR of 6.9% during review period.
