Abstracts

Non-destructive testing or NDT is a wide group of analysis or investigation techniques used to evaluate the properties or characteristics of a component, material, or system without producing damage. The terms non-destructive inspection (NDI), non-destructive evaluation (NDE) and non-destructive examination (NDE), are also frequently used to explain this technology. As NDT does not enduringly alter the article being examined or inspected, it is a highly appreciated and valuable technique that can save both time and money in product evaluation, research, and troubleshooting.
