NDT inspection point labels refer to special labels used to clearly identify and record specific inspection points during the non-destructive testing (NDT) process. These labels are usually pasted or fixed on key parts of the objects to be inspected (such as welded joints, pipelines, storage tanks, pressure vessels, etc.) to clearly indicate the specific location and scope of non-destructive testing. The design and content of NDT inspection point labels usually follow strict specifications and standards to ensure that they can accurately and clearly convey key information. The label usually contains key information such as the inspection point number, location description, inspection method (such as radiographic inspection, ultrasonic inspection, magnetic particle inspection, etc.), inspection date, and inspection personnel. This information is essential for tracking and managing the inspection process and helps to ensure the accuracy and integrity of the inspection work. In the field of non-destructive testing, NDT inspection point labels are widely used. They are not only used for equipment inspection in high-risk industries such as shipping, petroleum, chemical, aerospace, etc., but also widely used in various industrial fields such as machinery manufacturing, automobile manufacturing, and electronic product manufacturing. By using these tags, inspectors can quickly and accurately find and identify the parts that need to be inspected, thereby

improving inspection efficiency and quality, ensuring the safe operation of the equipment and extending its service life.
