According to our (Global Info Research) latest study, the global NE-glass market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

NE glass refers to a low dielectric fiber glass developed by Nitto Bosho Co., Ltd. for printed circuit boards (PCBs). The dielectric constant ? of NE glass (at 1MHz frequency) is 4.6, which is lower than the 6.6 of traditional E glass. The loss factor tan? of NE glass (at 1MHz frequency) is 0.0007, while that of traditional E glass is 0.0012, showing lower signal loss characteristics. NE glass is mainly used in printed circuit boards (PCBs) with high requirements for dielectric properties to improve the signal transmission efficiency of the circuit board and reduce signal loss. Due to the excellent performance of NE glass in the PCB field, it has been widely used in the manufacture of high-performance circuit boards and has promoted the development of related markets.
