According to our (Global Info Research) latest study, the global Near Field Communication Tester market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Near Field Communication (NFC) is a short-range wireless technology used for communication between two devices within a distance of less than 10cm. NFC technology is used between different devices to transmit small amounts of data through radio frequency identification transducers. NFC is a standards-based connectivity technology that provides a common way to connect a variety of contactless devices, enabling other new advancements and future IoT developments.

Similar to proximity card technology, NFC utilizes magnetic induction between two loop antennas. The two loop antennas are in a near magnetic field formed by each other, which is equivalent to forming an air-core transformer. It operates in the globally available, unlicensed radio frequency ISM (Industrial Scientific Medical) frequency band. It is this mode of communication that allows a smartphone or NFC-enabled device to connect with other devices in the vicinity.

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

According to our Communications Research Centre, in 2022, the global communication equipment was valued at US\$ 100 billion. The U.S. and China are powerhouses in the

manufacture of communications equipment. According to data from the Ministry of Industry and Information Technology of China, the cumulative revenue of telecommunications services in 2022 was ¥1.58 trillion, an increase of 8% over the previous year. The total amount of telecommunications business calculated at the price of the previous year reached ¥1.75 trillion, a year-on-year increase of 21.3%. In the same year, the fixed Internet broadband access business revenue was ¥240.2 billion, an increase of 7.1% over the previous year, and its proportion in the telecommunications business revenue decreased from 15.3% in the previous year to 15.2%, driving the telecommunications business revenue to increase by 1.1 percentage points.
