## Abstracts

According to our (Global Info Research) latest study, the global Near-Field EMC Scanner market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Near-field EMC scanner is a device used for measuring and analyzing electromagnetic emissions and field strength in close proximity to electronic devices or systems. It is specifically designed to assess electromagnetic compatibility (EMC) and identify potential sources of electromagnetic interference (EMI) in electronic equipment.

The near-field EMC scanner operates by scanning the near-field region around the device under test using specialized probes or sensors. It allows for precise mapping and visualization of the electromagnetic field distribution, identifying areas of high-intensity emissions or potential electromagnetic coupling paths.

The scanner can capture and analyze a wide frequency range of electromagnetic signals, including conducted emissions and radiated emissions in different modes and spectral bands. It helps engineers and technicians diagnose and troubleshoot EMC issues, ensuring compliance with regulatory standards and optimizing the electromagnetic performance of electronic systems.

Near-field EMC scanners are commonly used in industries such as telecommunications, automotive, aerospace, and electronics manufacturing for EMC testing, characterization, and design validation purposes.
