## Abstracts

According to our (Global Info Research) latest study, the global Near-space Travel market size was valued at US\$ 380 million in 2025 and is forecast to a readjusted size of US\$ 905 million by 2032 with a CAGR of 13.3% during review period.

Near-space travel specifically refers to sending passengers to the near-space region, located approximately 20 to 100 kilometers above Earth, between traditional aerospace and actual space, via suborbital flights and other methods.

The prospects for near-space travel are moving from proof-of-concept to initial commercialization, but its development still faces balancing challenges. In the short term, with companies like Eos X Space (Space Perspective) and WorldView launching commercial flights, a niche market primarily catering to high-end consumers and scientific research experiences is emerging. However, large-scale industrialization faces significant bottlenecks, such as the high cost and limited capacity of current single flights, hindering widespread adoption, and the need for long-term verification of reliability and safety. Furthermore, controversies surrounding its environmental impact will persist. In the long term, technological advancements in this field may lay the foundation for longer-distance orbital travel and high-speed point-to-point transportation, but it is more likely to remain a specialized tourism and experimental platform for the wealthy and specific institutions, rather than a mainstream mode of transportation.
