Abstracts

The global Needle-free Airtight Infusion Connector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The needle-free airtight infusion connector is used for connector connection during infusion. It is designed to prevent infection and leakage, and to provide a safer and more convenient method of infusion.

Traditional infusion connectors usually require a syringe or needle to be inserted into the connector for connection, which presents a risk of infection and the possibility of fluid leakage during connection and disconnection.
