Abstracts

The global Needle-Free Injection Device market size is expected to reach \$ 529 million by 2032, rising at a market growth of 9.7% CAGR during the forecast period (2026-2032).

Needle-free Injection Device is a type of medical injecting syringe that uses a high-pressure narrow jet of the injection liquid instead of a hypodermic needle to penetrate the epidermis. It is powered by compressed air or gas, either by a pressure hose from a large cylinder, or from a built-in gas cartridge, small cylinder, or spring.

Needle-free injection systems are novel ways to introduce various medicines into patients without piercing the skin with a conventional needle. It was developed to reduce the number of needle stick accidents and associated problems.

Firstly, the technology of needle-free injection device industry is developing and the industry concentration is not high, There are over 30 manufacturers around the world, and the leading companies are Zogenix, Bioject, Glide Pharma, Crossject Medical and Injex Pharma, right now the production is almost dominated by producers in Europe and United States. In United States, a few companies occupy more than 60 percent of domestic needle-free injector market. On the other hand, almost all the high-end products produced by the global leaders, and the producers mainly produce low-end products in China and India. USA and Europe have a long history and unshakable status in this industry, such as Bioject and Akra Dermojet, leading the needle-free injection device industry. As to Japan, many big corporation has come into this area, however, the rate of the business in this area is not high compared to other area because Japanese companies always have many business areas. In Germany, it is Injex Pharma that lead the industry.
