## Abstracts

The global Needle Lithium Ion Battery market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Needle lithium ion battery is a lithium ion battery with unique design, which is composed of vertically arranged needle electrodes. This design is different from the traditional flat or cylindrical electrode design of traditional lithium-ion batteries. The design of needle lithium ion battery has many advantages over the traditional design. First, the needle electrode provides a larger surface area, which enables higher energy density and faster charging time. Secondly, the vertical arrangement of electrodes allows better heat dissipation, reduces the risk of thermal runaway, and improves the safety of the battery. In addition, needle electrode is more flexible than traditional flat or cylindrical electrode, which reduces the risk of cracking or fracture during use.

This report studies the global Needle Lithium Ion Battery production, demand, key manufacturers, and key regions.
