According to our (Global Info Research) latest study, the global Needle Punched Polyester Nonwoven Fabric market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Needle Punched Polyester Nonwoven Fabric is a material with high air permeability, also known as needle-punched cotton or felt cloth. The process of needle-punched cotton is mainly produced and processed from PET polyester staple fiber, which goes through the process of fiber opening-ingredient ratio-carding-laying-netting-acupuncture-hot rolling-rolling and other processes. Needle-punched cotton has the characteristics of high porosity, good air permeability, high dust collection efficiency, and long service life that are unique to ordinary felt filter cloths, but it is relatively cheap. Because of its moderate temperature resistance, acid resistance, moderate alkalinity and very good wear resistance, it has become the most widely used variety in engineering geotextiles and non-woven filter materials.
