The global Needle Punched Polyester Nonwoven Fabric market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Needle Punched Polyester Nonwoven Fabric is a material with high air permeability, also known as needle-punched cotton or felt cloth. The process of needle-punched cotton is mainly produced and processed from PET polyester staple fiber, which goes through the process of fiber opening-ingredient ratio-carding-laying-netting-acupuncture-hot rolling-rolling and other processes. Needle-punched cotton has the characteristics of high porosity, good air permeability, high dust collection efficiency, and long service life that are unique to ordinary felt filter cloths, but it is relatively cheap. Because of its moderate temperature resistance, acid resistance, moderate alkalinity and very good wear resistance, it has become the most widely used variety in engineering geotextiles and non-woven filter materials.

This report studies the global Needle Punched Polyester Nonwoven Fabric production, demand, key manufacturers, and key regions.
