According to our (Global Info Research) latest study, the global Needle Roller Thrust Bearings market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Needle roller thrust bearings use a cage and needle roller assembly. The case-hardened cage is made of two precision pressed steel plates. The rollers are firmly fixed in the cage and can rotate smoothly even under large axial loads. These bearings are very small, so they can easily replace traditional thrust washers in the same installation space. In the automotive industry, this bearing is often used in planetary gears, constant mesh gearboxes, torque converters, etc.
