According to our (Global Info Research) latest study, the global Negative Air Machines and Air Scrubbers market size was valued at USD 48 million in 2023 and is forecast to a readjusted size of USD 64 million by 2030 with a CAGR of 4.0% during review period.

An air scrubber is a portable filtration system that removes particles, gasses, and/or chemicals from the air within a given area. These machines draw air in from the surrounding environment and pass it through a series of filters to remove contaminants.

A negative air machine uses ducting to remove contaminated air from a sealed containment area. The filtered air is exhausted outside of the containment area. This creates negative air pressure (a vacuum effect), which helps limit the spread of contaminants to other areas inside the structure.
