Abstracts

According to our (Global Info Research) latest study, the global Negative Dry Film market size was valued at US$ 942 million in 2025 and is forecast to a readjusted size of US$ 1251 million by 2032 with a CAGR of 3.9% during review period.

Negative Dry Film is a dry-film type photosensitive material composed of polymer resins, photoinitiators, reactive monomers, additives, and carrier films, typically supplied in roll or sheet form. During application, the film is laminated onto a substrate and processed through exposure and development to create patterned structures. Its defining feature is that the exposed areas undergo photochemical crosslinking, curing, or reduced solubility under ultraviolet light or a specific wavelength light source, allowing the exposed regions to remain after development while the unexposed regions are removed. Negative dry films are mainly used for circuit pattern transfer, electroplating masks, etching masks, solder mask protection, precision processing, and certain microstructure-forming applications. They are widely applied in printed circuit boards, IC substrates, lead frames, electronic materials, precision etching, solder mask formation, and research and development.

In 2025, global Negative Dry Film production reached approximately 1085 million Sqm, with an average global market price of around US$ 844 per k Sqm

The upstream raw materials of Negative Dry Film mainly include acrylic resins, epoxy resins, alkali-soluble binders, photopolymerizable monomers, oligomers, photoinitiators, sensitizers, dyes, inhibitors, adhesion promoters, plasticizers, solvents, polyethylene terephthalate carrier film and polyethylene protective film. Representative upstream suppliers include Mitsubishi Chemical Group, Kuraray, Arkema, BASF, etc.

The downstream applications of Negative Dry Film mainly include PCB, Semiconductor Packaging and Others. Representative downstream customers include Zhen Ding Technology, Unimicron, Compeq, Tripod Technology, TTM Technologies, etc.

The gross margin of Negative Dry Film varies by film thickness, application field, customer qualification level and product performance grade. Typical gross margins is about 25%?50%.

By product type, Negative Dry Film can be divided into Ultra-thin Dry Film, Thin Dry Film, Standard Dry Film and Thick Dry Film. Ultra-thin Dry Film refers to products with a thickness of ?15 ?m and is mainly used in fine-line, high-density interconnect, IC substrate and advanced packaging applications where high-resolution patterning, coating uniformity, low defectivity, low residue and tight line-width control are required. Thin Dry Film refers to products with a thickness of 15?50 ?m and is an important product range for fine-line printed circuit boards, high-density interconnect boards, flexible boards and selected package substrates, balancing resolution, adhesion, development latitude and production efficiency. Standard Dry Film refers to products with a thickness of 50?100 ?m and is suitable for conventional circuit imaging, etching resistance, pattern plating and tenting processes, representing a mature and broadly used thickness range. Thick Dry Film refers to products with a thickness of >100 ?m and is mainly used in thick plating, copper pillars, micro-bumps, high-aspect-ratio structures, microstructure fabrication and selected specialty packaging applications, where thickness stability, sidewall profile, plating resistance and stripping performance are more demanding.

By application, PCB is the largest and most established application area for Negative Dry Film. In this field, the material is used for circuit imaging, etching resistance, pattern plating and tenting in rigid boards, flexible boards, rigid-flex boards, high-density interconnect boards and multilayer boards, with strong requirements for cost control, yield, lamination stability, development window and lot-to-lot consistency. Semiconductor Packaging is the most technology-driven application area, where Negative Dry Film is used in IC substrates, redistribution layers, copper pillars, micro-bumps, fan-out packaging and other advanced packaging structures. This segment requires finer resolution, lower defect density, lower metal contamination, thicker film formation, stronger plating resistance and higher reliability.

Market Driving Factors are mainly supported by the increasing density and miniaturization of electronic products, which create stronger demand for fine-line

patterning materials; the transition of printed circuit boards toward high-density interconnect, multilayer, flexible and high-reliability structures, which continuously increases the consumption of stable pattern transfer materials; the development of semiconductor packaging technologies such as advanced packaging, fan-out packaging, redistribution layers, copper pillars and micro-bumps, which drives demand for ultra-thin, thin and thick high-end negative dry films; the growth of artificial intelligence servers, high-performance computing, automotive electronics, new energy vehicles, communications equipment and premium consumer electronics, which expands demand for high-end circuit boards and package substrates; the adoption of laser direct imaging, stepper exposure, automated lamination and continuous production processes, which raises requirements for photosensitivity, film thickness consistency and lot stability; the increasing focus on yield improvement, low defectivity, environmentally responsible processing and supply chain stability, which supports the replacement of low-end materials with high-quality Negative Dry Film; and the localization of electronic materials and regional supply chain restructuring, which create entry opportunities for domestic suppliers in mid- to high-end customer systems.

Market Restraints mainly include the high technical barriers in high-end Negative Dry Film formulation, as resin chemistry, photoinitiator systems, monomer balance, adhesion control, development latitude, stripping performance and defect control require long-term process know-how; long customer qualification cycles, especially in IC substrate and semiconductor packaging applications where materials must pass strict reliability, cleanliness, line-width control and mass-production stability validation; raw material price fluctuations in resins, photoinitiators, functional monomers, carrier films and protective films, which can affect production costs and gross margins; mature competition in standard dry films for general printed circuit boards, where price pressure may limit profitability in lower-end product grades; higher requirements for precision coating, cleanroom control, film thickness uniformity and process matching in ultra-thin and thick dry films, which increase research and quality-management costs; and cyclical fluctuations in consumer electronics, servers, automotive electronics and semiconductor capital expenditure, which can affect downstream order timing and create inventory volatility and short-term demand uncertainty.

This report is a detailed and comprehensive analysis for global Negative Dry Film market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some

of the selected leaders for the year 2025, are provided.

Key Features:

Global Negative Dry Film market size and forecasts, in consumption value ($ Million), sales quantity (million Sqm), and average selling prices (USD/K Sqm), 2021-2032

Global Negative Dry Film market size and forecasts by region and country, in consumption value ($ Million), sales quantity (million Sqm), and average selling prices (USD/K Sqm), 2021-2032

Global Negative Dry Film market size and forecasts, by Type and by Application, in consumption value ($ Million), sales quantity (million Sqm), and average selling prices (USD/K Sqm), 2021-2032

Global Negative Dry Film market shares of main players, shipments in revenue ($ Million), sales quantity (million Sqm), and ASP (USD/K Sqm), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for Negative Dry Film

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace

This report profiles key players in the global Negative Dry Film market based on the following parameters - company overview, sales quantity, revenue, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Asahi Kasei Corporation, Eternal Materials, Resonac Corporation (Showa Denko Materials), Qnity Electronics (DuPont Riston), Chang Chun Group, Kolon Industries, Hunan Initial New Materials, Nagase ChemteX America, Nippon Kayaku, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Market Segmentation

Negative Dry Film market is split by Type and by Application. For the period 2021-2032, the growth among segments provides accurate calculations and forecasts for consumption value by Type, and by Application in terms of volume and value. This analysis can help you expand your business by targeting qualified niche markets.

Market segment by Type

Ultra-thin Dry Film (?15 ?m)

Thin Dry Film (15?50 ?m)

Standard Dry Film (50?100 ?m)

Thick Dry Film (>100 ?m)

Market segment by Development Method

Aqueous-developable

Solvent-developable

Market segment by Sales Channel

Direct Sales

Indirect Sales

Market segment by Application

Printed Circuit Board

Semiconductor Packaging

Market segment by region, regional analysis covers

North America (United States, Canada, and Mexico)

Europe (Germany, France, United Kingdom, Russia, Italy, and Rest of Europe)

Asia-Pacific (China, Japan, Korea, India, Southeast Asia, and Australia)

South America (Brazil, Argentina, Colombia, and Rest of South America)

Middle East & Africa (Saudi Arabia, UAE, Egypt, South Africa, and Rest of Middle East & Africa)

The content of the study subjects, includes a total of 15 chapters:

Chapter 1, to describe Negative Dry Film product scope, market overview, market estimation caveats and base year.

Chapter 2, to profile the top manufacturers of Negative Dry Film, with price, sales quantity, revenue, and global market share of Negative Dry Film from 2021 to 2026.

Chapter 3, the Negative Dry Film competitive situation, sales quantity, revenue, and global market share of top manufacturers are analyzed emphatically by landscape contrast.

Chapter 4, the Negative Dry Film breakdown data are shown at the regional level, to show the sales quantity, consumption value, and growth by regions, from 2021 to 2032.

Chapter 5 and 6, to segment the sales by Type and by Application, with sales market share and growth rate by Type, by Application, from 2021 to 2032.

Chapter 7, 8, 9, 10 and 11, to break the sales data at the country level, with sales quantity, consumption value, and market share for key countries in the world, from 2021 to 2026.and Negative Dry Film market forecast, by regions, by Type, and by Application, with sales and revenue, from 2027 to 2032.

Chapter 12, market dynamics, drivers, restraints, trends, and Porters Five Forces analysis.

Chapter 13, the key raw materials and key suppliers, and industry chain of Negative Dry Film.

Chapter 14 and 15, to describe Negative Dry Film sales channel, distributors, customers, research findings and conclusion.

1 MARKET OVERVIEW

1.1 Product Overview and Scope
1.2 Market Estimation Caveats and Base Year
1.3 Market Analysis by Type
  1.3.1 Overview: Global Negative Dry Film Consumption Value by Type: 2021 Versus 2025 Versus 2032
  1.3.2 Ultra-thin Dry Film (?15 ?m)
  1.3.3 Thin Dry Film (15?50 ?m)
  1.3.4 Standard Dry Film (50?100 ?m)
  1.3.5 Thick Dry Film (>100 ?m)
1.4 Market Analysis by Development Method
  1.4.1 Overview: Global Negative Dry Film Consumption Value by Development Method: 2021 Versus 2025 Versus 2032
  1.4.2 Aqueous-developable
  1.4.3 Solvent-developable
1.5 Market Analysis by Sales Channel
  1.5.1 Overview: Global Negative Dry Film Consumption Value by Sales Channel: 2021 Versus 2025 Versus 2032
  1.5.2 Direct Sales
  1.5.3 Indirect Sales
1.6 Market Analysis by Application
  1.6.1 Overview: Global Negative Dry Film Consumption Value by Application: 2021 Versus 2025 Versus 2032
