A negative pressure suction device is a medical or industrial system designed to generate a controlled vacuum environment for the suction and collection of fluids, secretions, or gases. It typically consists of a vacuum pump, pressure control system, collection container, and tubing components. Its core function is to provide stable negative pressure for fluid removal or material extraction, widely used in surgical procedures, emergency care, and industrial suction applications.

Upstream includes vacuum pump components, pressure sensors and control circuits, plastic tubing, and collection container materials. Downstream applications include hospital operating rooms, emergency and nursing departments, as well as certain industrial extraction systems. The overall industry gross margin generally ranges from 30% to 50%, with higher margins for advanced medical-grade and intelligent models.

The global production of negative pressure suction devices is projected to reach 5.68 million units by 2025, with an average price of US\$220 per unit.
