According to our (Global Info Research) latest study, the global Neodymium-doped Glass market size was valued at US\$ 288 million in 2024 and is forecast to a readjusted size of USD 437 million by 2031 with a CAGR of 6.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Neodymium-doped glass is a special glass containing the rare earth element neodymium (Nd), which appears purple. Laser neodymium glass has many advantages such as good thermal stability, extremely high laser energy output, and excellent optical properties. It is widely used in the field of laser technology, especially playing an important role in high-energy lasers. Neodymium is the main element in neodymium glass materials. Due to export restrictions on rare earth ores and the scarcity of ores, global neodymium supply has come under greater pressure. The production cost of neodymium glass has increased, which to a certain extent has restricted the production and research and development progress of neodymium glass.
