Abstracts

The global Neomethylhesperidin Dihydrochalcone (NHDC) market size is expected to reach \$ 220 million by 2032, rising at a market growth of 9.4% CAGR during the forecast period (2026-2032).

In 2025, global Neomethylhesperidin Dihydrochalcone (NHDC) production reached approximately 1,120 tons, with an average global market price of around US\$104 per kilogram. Neomethylhesperidin dihydrochalcone (NHDC) is a substance derived from natural components of citrus fruits such as neohesperidin or naringin through biotransformation or chemical conversion. It is a high - intensity sweetener with a very high sweetness level, around 1500 - 1800 times sweeter than sucrose. It has a low - calorie content, and its glycoside group is hydrolyzed in the human body and does not participate in metabolism, so it provides very little energy (8.36J/g). It has a slow - onset and long - lasting sweet taste, and it can mask bitter flavors effectively. It is highly stable in the pH range of 2 - 7, which makes it a very stable and safe high - intensity sweetener.

Neohesperidin Dihydrochalcone (NHDC) is currently experiencing steady growth within the global market as a high-performance derivative of natural extracts. According to official annual reports from industry leaders like Chenguang Biotech, the continuous advancement of global 'sugar reduction' policies and the rising consumer preference for natural ingredients have propelled NHDC to high market penetration. It is increasingly utilized for its superior bitterness-masking and sweetness-enhancing properties in food and beverages, pharmaceutical taste-masking, and premium animal feed. China, leveraging its industrial chain advantages in deep processing of citrus resources, has established itself as the world's primary production and export hub.

In terms of market trends, NHDC is evolving from a standalone sweetener into a core component of complex flavor solutions, particularly for rectifying sensory profiles in low-sugar formulations. Opportunities lie in the industrial application of synthetic biology, which promises to overcome seasonal raw material limitations and enhance production elasticity. However, significant hurdles remain. First, stringent global regulatory standards for natural extract standardization impose high compliance costs on manufacturers. Second, as a niche ingredient, its public awareness remains lower than mainstream alternatives like erythritol, leading to high market education costs. Looking ahead, as the 'clean label' trend deepens, NHDC is poised for significant expansion within the functional food sector.

This report studies the global Neomethylhesperidin Dihydrochalcone (NHDC) production, demand, key manufacturers, and key regions.
