Neonatal infants enteral feeding devices are specialized medical devices used to provide essential nutrients and fluids directly into the gastrointestinal tract of premature or low birth weight infants. These devices are crucial for the care of neonatal patients who may have underdeveloped or immature digestive systems, making oral feeding difficult or impossible.

The enteral feeding process involves delivering formula or breast milk through a tube that is either inserted through the nose and down into the stomach (nasogastric tube) or directly through a surgically created opening in the abdomen (gastrostomy or jejunostomy tube). Neonatal infants enteral feeding devices are designed to be safe, precise, and gentle to ensure optimal nutrition and growth for these fragile patients.

Global key players of Neonatal Infants Enteral Feeding Devices include Avanos Medical, Fresenius Kabi and Cardinal Health, etc. The top three players hold a share over 40%.
