According to our (Global Info Research) latest study, the global Neonicotinoid Pesticide Formulation market size was valued at US\$ 1878 million in 2024 and is forecast to a readjusted size of USD 2474 million by 2031 with a CAGR of 4.4% during review period.

Neonicotinoid pesticide formulation refers to pesticide products that use neonicotinoid compounds as the active ingredients. Neonicotinoids are a class of synthetic insecticides that resemble nicotine in chemical structure but are more toxic to insects. They work by interfering with the insect's nervous system, specifically by targeting nicotinic acetylcholine receptors, which disrupts nerve transmission and ultimately leads to insect death. These pesticides are commonly used to control a wide range of pests, particularly sucking pests (such as aphids, whiteflies, and leafhoppers) and chewing pests (such as beetles). Common neonicotinoid pesticides include Imidacloprid, Thiamethoxam, and Acetamiprid.
