According to our (Global Info Research) latest study, the global Neoprene Waterstop market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A new type of material, by setting two steel sheets on both wings of the rubber waterstop, can effectively solve the problem that the thermal expansion and contraction of rubber and concrete are not synchronized. Neoprene waterstop belt is generally set together with structural deformation joints or initiation joints, which can not only achieve the purpose of stopping water, but also withstand the dislocation of adjacent plates within about 40mm without pulling cracks, thereby strengthening the play of water-stopping performance.
