Abstracts

According to our (Global Info Research) latest study, the global Nepheline Syenite market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Nepheline syenite is a commercially prepared, rare feldspathoid-rich rock product. The process control found in most nepheline syenite operations offers a controlled level of Fe₂O₃ that can help to improve fired color. Most noncommercial nepheline syenite deposits are gray or dark in color and have high iron levels that severely limit their potential in industrial applications.

Canada, Norway and Russia were the three largest nepheline syenite production countries in the world. Other countries with less production included Brazil, China and Turkey. The leading producing company was Belgium-based SCR Sibelco NV, through its subsidiaries Sibelco Europe in Norway and Unimin Corp. in Canada. Others included Finetion Industrial Minerals Ltd. in China and OJSC Apatit AG in Russia.
