According to our (Global Info Research) latest study, the global Nephrology EMR Software market size was valued at USD 1575.3 million in 2023 and is forecast to a readjusted size of USD 2358.3 million by 2030 with a CAGR of 5.9% during review period.

Electronic health record (EHR) software—also often referred to as electronic medical record (EMR) software—addresses many of the same concerns for nephrologists as it does for practitioners in any medical specialty. Broadly speaking, this software will automate repetitive tasks, streamline documentation, improve access to information, enable more accurate and profitable coding and foster efficiency.

Nephrology EMR software is an electronic medical record system (more commonly referred to as an electronic health record, or EHR, system) that is specifically designed to be used by nephrology specialists. These EMRs / EHRs include specific functionality, features and data sets that will only be used by nephrologist practices; for example, they will be pre-programmed with nephrology CPT & ICD coding as well as templates that address specific nephrology-related fields.

While nephrology practices can certainly use general EMR or EHR software systems, utilizing a specialty-specific system will save time and improve accuracy of records, diagnosis, treatment, and billing.

Global Nephrology EMR Software key players include Allscripts, MEDITECH, NextGen Healthcare, Cerner, CompuGroup Medical, etc. Global top five manufacturers hold a share over 30%.

North America is the largest market, with a share about 40%, followed by Europe and Asia-Pacific, both have a share over 55 percent.
