According to our (Global Info Research) latest study, the global Nerve Repair Biomaterial market size was valued at USD 255.2 million in 2023 and is forecast to a readjusted size of USD 1027.2 million by 2030 with a CAGR of 22.0% during review period.

Nerves provide the pathways for both motor and sensory signals throughout the body and physical damage to a peripheral nerve or the inability to properly reconnect nerves can result in the loss of muscle function and/or feeling. Nerves can be damaged in a number of ways. When a nerve is cut due to a traumatic injury or surgery, functionality of the nerve may be compromised, causing the nerve to no longer carry the signals to and from the brain to the muscles and skin and reducing or eliminating functionality. Nerve damage or discontinuity of this type generally requires a surgical repair.
