According to our (Global Info Research) latest study, the global Net Weight Filling System market size was valued at US\$ 777 million in 2024 and is forecast to a readjusted size of USD 1001 million by 2031 with a CAGR of 4.0% during review period.

Net Weight Filling System is a high-precision automated filling device used to accurately fill liquid, powder or granular materials according to the net weight of the product. The system monitors the filling process in real time through advanced weighing sensors to ensure that the material in each container reaches the set target weight. Compared with traditional volumetric filling, Net Weight Filling System can eliminate filling errors caused by density changes, so it is widely used in industries with strict requirements on product weight, such as food and beverage, chemicals and pharmaceuticals.
