According to our (Global Info Research) latest study, the global Network Access Device for Automotive T-Box market size was valued at US\$ 1073 million in 2024 and is forecast to a readjusted size of USD 2046 million by 2031 with a CAGR of 8.8% during review period.

Network Access Device (NAD) is a core communication module in vehicular networking systems, primarily used in T-Boxes (Telematics Boxes) to enable efficient and secure communication between the vehicle and external networks. Beyond T-Boxes, NADs are widely applied in other critical automotive systems. In smart antenna modules, NADs optimize signal reception and transmission, ensuring stable connectivity. Within Advanced Driver Assistance Systems (ADAS), NADs facilitate real-time data transmission and processing from sensors, supporting features like automatic emergency braking and lane-keeping assistance, thereby enhancing driving safety and automation. Additionally, NADs play a crucial role in vehicular networking services, fleet management, and smart charging stations, providing users with more convenient, safe, and efficient travel experiences.

Network Access Devices (NADs), as a core component of Telematics Boxes (T-Boxes), are experiencing rapid growth and transformation. According to the latest market research, global NAD sales reached approximately 35 million units in 2024, with projections indicating this number will grow to 55 million units by 2031, demonstrating significant growth momentum. From a cost structure perspective, NADs account for 25% to 30% of the total T-Box cost. As communication technology transitions from 3G and 4G to 5G, the average market price is expected to rise, further driving industry development. Notably, the NAD industry has a high market concentration, with the top

six companies collectively holding over 80% of the global market share. Major players are actively expanding their market presence through strategic acquisitions and distributor network expansions.

For instance, on October 23, 2024, EUROPASOLAR S.r.l., headquartered in Luxembourg, successfully acquired part of the assets of Rolling Wireless (HK) Limited from Fibocom Wireless Inc. and the 100% equity of Rolling Wireless (Luxembourg) S.r.l. for \$150 million. This acquisition not only bolstered EUROPASOLAR's position in the cellular network access device (NAD) sector but also highlighted international investors' confidence in this high-growth industry. With advancements in connected vehicle technology and increasing market demand, the NAD market is set to continue its robust growth. Leading market participants are enhancing their competitiveness through strategic mergers and channel expansions, while technological upgrades and rising costs present new opportunities and challenges for the industry. In the coming years, the NAD sector is poised to play a crucial role in driving the global automotive industry's intelligent transformation.
