Abstracts

Fiber optic cable, twisted pair cable, and coaxial cable are the three main types of network cables used in communication systems. Fiber optic cable consists of a bundle of glass threads, each of which is capable of transmitting messages modulated onto light waves. Twisted pair cable is made by putting two separate insulated wires together in a twisted pattern and running them parallel to each other, which helps to reduce crosstalk or electromagnetic induction between pairs of wires. Coaxial cable is a type of copper cable which has an inner conductor surrounded by foam insulation, symmetrically wrapped by a woven braided metal shield, then covered by in a plastic jacket.
