The global Network Equipment Building Systems (NEBS) Testing Services market size is expected to reach \$ 450 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

To address the challenges of verifying the reliability of communication network equipment under extreme environmental conditions, stringent operator certification requirements, and potential operational safety hazards after equipment is put into service, network equipment building system testing services have emerged. Since the large-scale deployment of telecommunications network infrastructure in the late 20th century and the gradual establishment and improvement of network equipment building system standards, the field of communication equipment reliability testing and certification has developed significantly. Currently, network equipment building system testing services have evolved into a comprehensive service encompassing environmental reliability testing, seismic testing, electromagnetic compatibility testing, thermal characteristic testing, and safety assessment. These services are widely used in communication equipment manufacturers' product certification for network access, telecommunications operators' centralized procurement selection testing, data center infrastructure acceptance, and communication equipment room operation and maintenance assessment. They ensure the long-term stable operation of equipment in harsh environments and meet industry access requirements.
