Abstracts

The global Network Management market size is expected to reach $ 23056 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

The gross profit margin of major companies in the industry was approximately 45%–65%.

Network Management refers to software platforms, appliances, and related solutions used to monitor, configure, control, optimize, and maintain communication networks. Core functions include network discovery, topology management, performance monitoring, fault detection, configuration management, traffic analysis, alerting, automation, and reporting. Modern platforms increasingly integrate artificial intelligence, cloud-based management, software-defined networking, and analytics to support enterprise, carrier, data center, and hybrid network environments.

The industrial chain of Network Management includes upstream servers, network hardware, sensors, software development tools, cloud infrastructure, databases, analytics engines, and cybersecurity technologies; midstream covers platform development, monitoring software, configuration tools, analytics, integration, deployment, licensing, and technical support; downstream applications mainly include telecom operators, enterprises, data centers, financial institutions, government, healthcare, education, manufacturing, and cloud service providers.

Network management encompasses software, platforms, and related technologies used to monitor, configure, optimize, troubleshoot, and maintain network infrastructure and connected devices. It is widely applied across enterprises, data centers, telecommunications networks, government organizations, and cloud environments.

Market demand is supported by expanding network scale, increasing device connectivity, cloud adoption, hybrid IT architectures, and growing requirements for network availability and security. Technology development is moving toward centralized management, network automation, real-time observability, artificial intelligence-assisted operations, and predictive fault detection. The growing complexity of multi-cloud, software-defined, wireless, and edge networks creates opportunities for unified management platforms capable of providing end-to-end visibility. AI-driven analytics can further reduce troubleshooting time and improve operational efficiency. However, integration with heterogeneous legacy systems, data complexity, cybersecurity concerns, implementation costs, and shortages of skilled network professionals remain important challenges. Future market development will emphasize intelligent automation, unified visibility, predictive operations, cloud-native deployment, security integration, and simplified management of increasingly distributed network environments.

Report Scope

This report studies the global Network Management demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Network Management, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Network Management that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Network Management total market, 2021-2032, (USD Million)

Global Network Management total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Network Management total market, key domestic companies, and share, (USD Million)

Global Network Management revenue by player, revenue and market share 2021-2026, (USD Million)

Global Network Management total market by Type, CAGR, 2021-2032, (USD Million)

Global Network Management total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Network Management market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Cisco Systems, Inc., Hewlett Packard Enterprise Company, Broadcom Inc., SolarWinds Corporation, IBM Corporation, Extreme Networks, Inc., Nokia Corporation, Ericsson AB, Arista Networks, Inc., Fortinet, Inc., etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Network Management market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
